Allowable Subject Matter

1. This action is in response to the communication dated March 27, 2006 with the cancellation of claims 1-12, 14-15 and 17-18.
2. Claims 13, 16 and 19-27 are allowed.

The following is an examiner's statement of reasons for allowance:

The present invention is directed to controlling the security association on an application on a socket of a communication network. The IPsec security association is used to protect data transferred over the Internet. Even when there is no communications going on at certain web site, the IPsec driver for the web site still maintains the security association as active, therefore results in the security association being maintained for longer than is necessary. One solution to this is for the IPsec driver to periodically remove idle security associations which have not been used, however, this may expire security associations that are still in use. According to the invention, this idle detection could be made more efficient and could be done in a more timely manner if the IPsec driver had some context information it could correlate with the security association (i.e. "determining whether any other sockets is correlated with the security association, and if it is determined that there is no other socket is correlated with the security association, deleting the security association" in claims 13, 16, 22, 24 and 27).

The closest prior art, Engel et al. (6,519,636) discloses a way to control how packets are transmitted from an application to the network and how packets received from the network are passed to the application, fails to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
